

ECTOPIC PREGNANCY

Ingredients

- Plasticine
- Pig bowel segments (15-20 cm)
- Chick peas
- Shallow plastic container
- Towel
- Grounding cautery pad
- Mayo scissors
- 2-0 Sofsilk on a straight needle
- Lap trainer

Steps

1. Mold plasticine to create a model of a uterus

2. Leave a longitudinal trench on top of the fundus of the uterus to place and secure the Fallopian tubes later

The view from top of the trench.

3. Cut pig bowel segment longitudinally (if the bowel is too wide, trim it to desirable size, about 2 or 3 cm wide)

4. Strip off extra fat

5. Position chick peas (1 or more) at the center

(Each pea will represent an ectopic pregnancy. For multiple practices, more than one can be placed in the model)

6. Fold the top portion of the bowel over to cover chick pea(s)

7. Suture the opposite walls of the bowel strip using running suture technique with 2-0 Sofsilk on a straight needle

8. Put the end of the created tube into the trench on the body of the plasticine uterus

9. Put the grounding cautery pad on a plastic container, lined with a towel
 - Place the model onto the grounding pad
 - Place the tray with the model into the lap trainer
